 RANDERS REB

reFRAME

reFRAME presents seating units that together can be arranged into a lounge area situated at Roskilde Festival. The design is streamlined, lightweight and offers both social interaction and individual relaxation. One seating unit consist of only three VELUX window frames weaved together by recycled rope. Together the seating units offer flexibility in arrangement, allowing for the creation of different social layouts and atmospheres.

The unit encourages all-around comfort extending a welcoming invitation from every angle. The materials are thoughtfully chosen to maintain a cohesive and authentic aesthetic adding as little material as possible. Exclusively using recycled materials, VELUX windows, recycled rope and wood offcuts, the construction achieves structural integrity without the need for any metal components, such as screws or hinges.

Each component is designed for easy disassembly, facilitating flatpacking for future use or adaptation to alternative settings. Additionally, the weave design allows ventilation features between the ropes, enhancing comfort during use.
