

Window Wonderwall

A wall that unifies instead of dividing

Window Wonderwall is an interactive meeting place where you can hang out with people in between concerts at Roskilde Festival 2024.

Our concept is walls made up of scrapped window frames. We have put these together to form a cross-like formation, which creates four spaces for interaction between people.

The idea behind our concept is to build something that gives people an opportunity to explore and have fun together, while also maybe meeting new people.
