

BIKS

Recycling with a bounce!

BIKS VISION

We create a comfortable and sustainable seating environment for the guests at Roskilde festival, by using a material that can't be reused

REUSE OF NON-RECYCABLE MATERIAL

Once bicycle tubes are punctured, they cannot be reused and are therefore thrown directly into small combustibles. It's a shame, as the tubes can easily be used for other things than tyres on a bicycle, as it's a durable and strong material even when discarded.

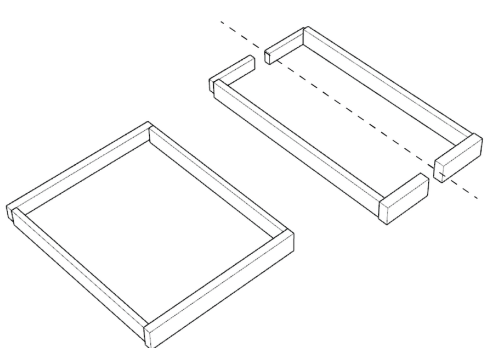

We saw potential in this and thought we would find a way to recycle the bicycle tubes, it became BIKS.

We have been in contact with a bicycle mechanic store in Aarhus, where we got a lot of tubes for free, and we can easily get more. In around two days they collected 20 tubes - and that is only one single store. Imagine how many tubes that are thrown away in a year in Denmark - that's A LOT.

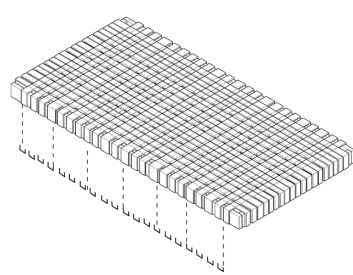

ADJUSTABILITY

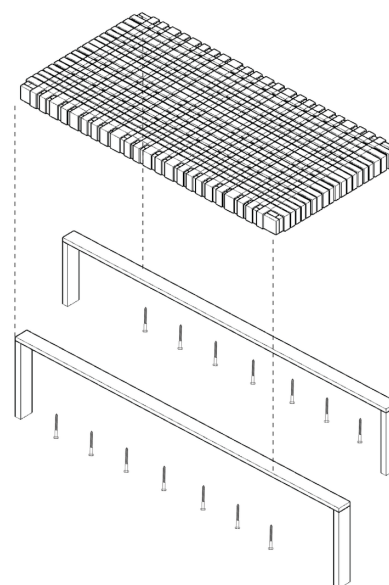

We have also focused a lot on making the concept adjustable, so that it can be durable in many situations with different types of window frames. The concept of the construction is that we use one frame as seating, and one frame, that is cut in half, for legs.

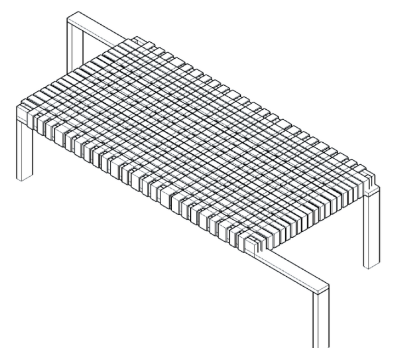

2 frames of any size
- 1 frame cut in halves to make
chairlegs

Frame is braided with tubes
- fixed with staples on the
inside

Braided frame and legs
- joined and fixed with screws

BIKS is made!
