Born to build vessels

Keppel FELS scholar Milton Tan has benefited from his studies at the Singapore Institute of Technology.

Sydney's show

One can say that shipbuilding is in Mr Milton Tan’s blood, for he shares a love for the industry with his father, Mr Tan, a skipper of a cargo ship. As a child, Mr Tan would accompany his father on the ship, and would later assist him in his work.

Mr Tan went on to study marine and offshore technology at the Singapore Institute of Technology, where he completed a Bachelor of Engineering in Marine Engineering and Safety. He credits his studies at the SIIT for giving him a solid foundation in the industry, and for providing him with the skills necessary to thrive in the field.

After completing his studies, Mr Tan joined Keppel FELS, a leading shipbuilding company in the Asia-Pacific region. He quickly rose through the ranks, and is now a Senior Marine Engineer.

Mr Tan’s passion for shipbuilding is evident in his work, as he strives to ensure that every ship he works on is built to the highest standards. He is particularly proud of his work on the Singapore–Kuwait oil pipeline, where he oversaw the design and construction of the ships.

Mr Tan believes that the future of shipbuilding is bright, as the industry continues to expand and develop. He is excited about the opportunities that lie ahead, and is determined to make a significant contribution to the industry.

Mr Tan encourages others to pursue careers in shipbuilding, as it is a rewarding and fulfilling field. He believes that those who are passionate about the industry will find success and satisfaction in their work.
